

Lab 6 Excercise

Name: Nguyễn Hữu Hoàng Nam

StudentID: ITCSIU23028

EXERCISE 5:

```
package com.student.filter;

import javax.servlet.*;
import javax.servlet.annotation.WebFilter;
import javax.servlet.http.*;
import java.io.IOException;
@WebFilter(filterName = "AuthFilter", urlPatterns = {"/*"})
public class AuthFilter implements Filter {
    private static final String[] PUBLIC_URLS = {
        "/login",
        "/logout",
        ".css",
        ".js",
        ".png",
        ".jpg",
        ".jpeg",
        ".gif",
        ".ico"
    };
    @Override
    public void init(FilterConfig filterConfig) throws ServletException {
        System.out.println("AuthFilter initialized - protecting application routes");
    }
    @Override
    public void doFilter(ServletRequest request, ServletResponse response, FilterChain chain)
        throws IOException, ServletException {
        HttpServletRequest httpRequest = (HttpServletRequest) request;
        HttpServletResponse httpResponse = (HttpServletResponse) response;
        String requestURI = httpRequest.getRequestURI();
        String contextPath = httpRequest.getContextPath();
        String path = requestURI.substring(contextPath.length());
        if (isPublicUrl(path)) {
            chain.doFilter(request, response);
            return;
        }
        HttpSession session = httpRequest.getSession(false);
        boolean isLoggedIn = (session != null && session.getAttribute("user") != null);
        if (isLoggedIn) {
            chain.doFilter(request, response);
        } else {
            httpResponse.sendRedirect(contextPath + "/login");
        }
    }
}
```

```

    }
    @Override
    public void destroy() {
        System.out.println("AuthFilter destroyed");
    }
    private boolean isPublicUrl(String path) {
        if (path.equals("/") || path.isEmpty()) {
            return true;
        }
        if (path.equals("/login") || path.startsWith("/login")) {
            return true;
        }
        if (path.equals("/logout") || path.startsWith("/logout")) {
            return true;
        }
        for (String publicUrl : PUBLIC_URLS) {
            if (publicUrl.startsWith(".") && path.endsWith(publicUrl)) {
                return true;
            }
        }
        return false;
    }
}

```

Flow:

1. User access resource
2. Activate AuthFilter
3. Take out request url
4. Check whether it is public url or not
5. If public url, allow the request go through to servlet
If not, get user session
 - If they have it, allow them to continue
 - Else, redirect to /login page

EXERCISE 6:

The screenshot shows a web browser window with the URL `localhost:8080/StudentManagementMVC/student?action=list&error=Access%20denied.%20Admin%20privileges%20required.`. The page title is "Student Management System" with a book icon. Below it is the subtitle "MVC Pattern with Jakarta EE & JSTL". A red error message box contains the text "Access denied. Admin privileges required.". Below the message is a search bar with placeholder text "Search by student code, name, or email..." and a "Search" button. There is also a dropdown filter for "Major" set to "All Majors". A blue button labeled "+ Add New Student" is visible. The main content area displays a table of student data:

| ID | STUDENT CODE | FULL NAME | EMAIL | MAJOR | ACTIONS |
|----|--------------|---------------|----------------------|------------------------|---|
| 2 | SV002 | Tran Thi ABCD | b.tran@example.com | Information Technology | <button>Edit</button> <button>Delete</button> |
| 1 | SV001 | Nguyen Van A | a.nguyen@example.com | Computer Science | <button>Edit</button> <button>Delete</button> |

```
package com.student.filter;
import com.student.model.User;
import javax.servlet.*;
import javax.servlet.annotation.WebFilter;
import javax.servlet.http.*;
import java.io.IOException;
@WebFilter(filterName = "AdminFilter", urlPatterns = {"/student"})
public class AdminFilter implements Filter {
    private static final String[] ADMIN_ACTIONS = {
        "new",
        "insert",
        "edit",
        "update",
        "delete"
    };
    @Override
    public void init(FilterConfig filterConfig) throws ServletException {
        System.out.println("AdminFilter initialized - protecting admin-only actions");
    }
    @Override
    public void doFilter(ServletRequest request, ServletResponse response,
FilterChain chain)
        throws IOException, ServletException {
        HttpServletRequest httpRequest = (HttpServletRequest) request;
        HttpServletResponse httpResponse = (HttpServletResponse) response;
        String action = httpRequest.getParameter("action");
        if (isAdminAction(action)) {
            HttpSession session = httpRequest.getSession(false);
```

```

        User user = null;
        if (session != null) {
            user = (User) session.getAttribute("user");
        }
        if (user != null && user.isAdmin()) {
            chain.doFilter(request, response);
        } else {
            String contextPath = httpRequest.getContextPath();
            httpResponse.sendRedirect(contextPath +
                "/student?action=list&error=Access denied. Admin privileges required.");
        }
    } else {
        chain.doFilter(request, response);
    }
}
@Override
public void destroy() {
    System.out.println("AdminFilter destroyed");
}
private boolean isAdminAction(String action) {
    if (action == null || action.trim().isEmpty()) {
        return false;
    }
    for (String adminAction : ADMIN_ACTIONS) {
        if (adminAction.equalsIgnoreCase(action)) {
            return true;
        }
    }
    return false;
}
}
}

```

Flow:

1. User take action through url
2. Filter check whether it is admin action or not
3. If not, continue to controller
If admin action, get session and check what type of user
 - If not admin, redirect with query param error
 - If admin, allow to go through filter

Exercise 7:

 Student Management System

Welcome, Admin User **ADMIN** Dashboard Logout

Student Management System

MVC Pattern with Jakarta EE & JSTL

Search by student code, name, or email...

Filter by Major: All Majors

| ID | STUDENT CODE | FULL NAME | EMAIL | MAJOR | ACTIONS |
|----|--------------|---------------|----------------------|------------------------|---|
| 2 | SV002 | Tran Thi ABCD | b.tran@example.com | Information Technology | <input type="button" value="Edit"/> <input type="button" value="Delete"/> |
| 1 | SV001 | Nguyen Van A | a.nguyen@example.com | Computer Science | <input type="button" value="Edit"/> <input type="button" value="Delete"/> Activate Windows Go to Settings to activate Windows. |

 Student Management System

Welcome, John Doe **USER** Dashboard Logout

Student Management System

MVC Pattern with Jakarta EE & JSTL

Search by student code, name, or email...

Filter by Major: All Majors

| ID | STUDENT CODE | FULL NAME | EMAIL | MAJOR |
|----|--------------|---------------|----------------------|------------------------|
| 2 | SV002 | Tran Thi ABCD | b.tran@example.com | Information Technology |
| 1 | SV001 | Nguyen Van A | a.nguyen@example.com | Computer Science |

Activate Windows
Go to Settings to activate Windows.

Exercise 8:

Change Password

Update your account password

 For security reasons, please choose a strong password that you haven't used before.

Current Password

Enter your current password

New Password

Enter your new password

Password Requirements:

- Minimum 8 characters long
- Must be different from current password

Confirm New Password

Re-enter your new password

 **Change Password**

[← Back to Dashboard](#)

Flow:

1. User clicks "Change Password"
2. User logged in? → NO → Redirect to /login
↓ YES → Continue
3. Show change-password.jsp form
4. User fills form and submits
5. Verify current password with BCrypt
6. Hash new password with BCrypt
7. Update database

8. Redirect to /dashboard?message=Success
